

OSSIAN LS[®]

LIQUID SPRAYER

The first sprayer designed specifically for de-icing sidewalks and steps.

Simple user controls, with on/off switch, operator trigger for spray control, and adjustable lever for extending and retracting boom.

Quick change tank system has capacity to cover 5000 sqft of application per tank.

Exclusive ColdTech[®] pump, optimized for winter temperatures and handling of Ossian liquid de-icers.

Retractable spray boom operated by user controls.

48" wide boom spray pattern covers a standard sidewalk width in a single pass.

Spray wand with hose for treating steps and other difficult to reach areas.

Rechargeable battery power supply.

Foam filled tires will not go flat.

Anti-icing just got easy.

The Calm Before the Storm™

The use of liquid anti-icers in a winter toolkit has been proven to reduce costs, reduce labor and reduce chlorides. Applying liquids ahead of a winter storm event prevents the bonding of snow to your traffic areas. It is this bond that forms the ice underneath your snow.

The Ossian LS® is the first walk sprayer designed specifically for the application of liquid anti-icers.

Spray Boom and Wand Applications

The Ossian LS® was designed specially for the winter maintenance team responsible for city or facility de-icing of sidewalks and steps. The user-controlled boom unfolds to spray a standard four foot sidewalk in a single pass while the spray wand and hose allows the operator to easily treat outdoor steps.

5000 sqft or 1250 ft of Sidewalk

The four foot spray boom range of the Ossian LS® effectively treats 1250 feet of sidewalk on a single tank (when applying the recommended one gallon per 1000 square feet at an average walking speed.) The five gallon tank is easily changed in the field without tools.

Protected from Corrosion

The all-plastic body with protected pump and battery compartments is designed to fend off the corrosive effects of anti-icers that destroy lesser made metal bodied sprayers.

ColdTech® Liquid De-Icer Pump

The ColdTech® pump in the Ossian LS® was designed specifically for the winter application of Ossian's Liquid De-Icers.

Rechargeable Power

The Ossian LS® is powered by a rechargeable 12V non-spillable battery.
